

Full time Quant Software Developer - International FinTech startup

Symetrics is a European award winning FinTech startup with offices in Apeldoorn, Breukelen and London. We build SyMath, our flagship software platform allowing our clients to conduct in-depth risk analyses of investment portfolios. Examples are stress testing, risk-return analysis and asset or derivatives valuation. Our clients include (private) banks, wealth managers, central banks, pension funds and asset managers.

The macro-economy is a complex system. We model behavior of macro-economic agents such as central banks, investors and consumers using nonlinear dynamics (complexity theory). This allows, among other things, simulation of sudden financial crises and the impact on investment portfolios. Our approach reduces data dependency and improves model output in terms of realism and relevance. SyMath is based on Wolfram Research technology (Mathematica).

For our Software Development team in Breukelen we are looking for a:

Quant Software Developer

with advanced programming experience (preferably Wolfram Language, or similar programming language).

You will join a team of econometricians with strong programming skills. Our Software Development team builds a broad financial risk application platform satisfying modern IT standards. Areas of activity include algorithmics, cloud computing, dataset management, testing and user interface design for Symetrics' global clients.

Job requirements:

- Academic background in Quantitative Economics (Econometrics, Actuarial Sciences, Mathematics)
- Preferably excellent academic performance and/or a PhD in a relevant field
- A passion for programming, preferably Wolfram Language (or a similar programming language)
- Working and programming experience is a plus
- Experienced in or an interest in macro-economic dynamics, financial risk management, econometrics, non-linear dynamics and fundamental IT
- Good communicator, flexible, positive critical thinker and an experienced team player
- Analytic, accurate, result-oriented, pro-active, high energy-level and above all, a good sense of humor

Compensation and benefits:

- Full-time position, based in Breukelen (The Netherlands) (at walking distance from the NS station and next to the A2 highway)
- Competitive remuneration
- A dynamic and challenging working environment in a diverse, international team
- Be part of an award winning innovate FinTech company with room for personal development, steep learning curves, creativity and initiative
- A unique opportunity to be actively involved in building next generation financial risk models

If you think you meet our profile and you want to seriously disrupt the current financial risk technology industry and add value to our clients through innovation and great software products, we invite you to send us your motivation letter and resume.
