We are doing a multimodal interaction project at the Eindhoven University of Technology, cooperating with the EIT ICT Lab. We are exploring a new way of multimodal interaction to improve the communication between the users through the social networks.

During this study, you will be asked to use the new designed LBSD system with three different interaction methods by following the given scenario. You will be requested to fill in a questionnaire after each section. At the end of the experiment, an interview will be carried out with you. The whole user study (including the interview) is designed to be approximately 45 minutes in length. If there are any questions you feel you cannot answer or that you do not feel comfortable answering, feel free to indicate this and we will move on to the next question.

All the information will be kept confidential. We will keep the data in a secure place. Only the researchers within the MMI project group have access to this information. This user study is designed to compare the three different interaction methods which can be applied in a LBSD system.

Participant's Agreement:

I am aware that my participation in this user study is voluntary. If, for any reason, at any time, I wish to stop the user study, I may do so without having to give an explanation. I understand the intent and purpose of this research.

The researcher has reviewed the individual and social benefits and risks of this project with me.

I am aware the data will be used for the academic research purpose. I have the right to review, comment on, and/or withdraw information prior to a paper's submission and a presentation. The data gathered in this study are confidential and anonymous with respect to my personal identity unless I specify/indicate otherwise.

I have read the above form, and, with the understanding that I can withdraw at any time, and for whatever reason, I consent to participate in today's user study.
